

# ENERGY STAR QUALIFIED WATER HEATERS

According to ENERGY STAR® estimates, the average home spends about \$1,900 annually on energy bills. Higher efficiency water heaters can help reduce those costs.

If you're replacing an existing water heater or planning the installation of a new water heater, selecting an ENERGY STAR® qualified product can save money.

We are proud to introduce State's ENERGY STAR® qualified water heaters. State water heaters are built with an enhanced combustion system and all of the components that make them one of the most durable products you can buy. State residential water heaters are equipped with a Flammable Vapor Ignition Resistant (FVIR) design and offer flexible venting options, ensuring end users a package of efficiency and durability.
