

THERE'S NOTHING STANDARD ABOUT PROLINE® MASTER

Blue Diamond® Glass Tank Lining

A patented commercial-grade formula that provides superior tank protection and corrosion resistance compared to the industry standard glass lining.

DynaClean™ Automatic Sediment Cleaning System

Automatic self-cleaning action greatly reduces sediment accumulation and maximizes hot water output.

CoreGuard™ Anode Protection

The rod's stainless steel center core allows the anode to be secured in place, extending the life of the tank. Stainless steel core technology is also used in our industry-leading commercial product line.

Longer-Lasting Stainless Steel Electric Elements

Commercial-Grade Brass Drain Valves

Full-flow tamper-resistant design that drains faster versus other valve designs.

We believe that your customer's water heater should overperform no matter where it's installed. That's why, when it comes to providing durable and reliable hot water, the State ProLine® family of products removes the line between what goes in a commercial water heater and a residential unit. Our contractor-exclusive ProLine® Master 8-year products do just that by using many of the same components as our industry-leading commercial heaters.
